

Note: This is the UI implementation checklist. After you approve, I'll implement global theme + shared components, then apply page-by-page.

Industrial-Level UI Design Spec (Industryprime FMS)

Doc version: 0.1 (v0.1 for review)

Target: Modern industrial look + consistent UX across **all Pages, Sections, and Dashboards**

Stack: React + Vite + Ant Design (ConfigProvider theme + component style overrides)

0) Goal (what “industrial level” means here)

- **Crisp hierarchy:** strong page titles, consistent section headers, predictable spacing.
 - **Industrial palette:** cool blues + warm orange accents (only for actions/alerts), dark surfaces for depth.
 - **Reusable templates:** every page uses the same shell, page header, cards, tables, and empty/loading states.
 - **Fast scanning:** dashboards use dense card grids, compact filters, and consistent chart containers.
 - **Consistent states:** empty/failed/locked/suspended messages look the same everywhere.
-

1) Global Visual Tokens (colors, borders, surfaces)

Use these as the “single source of truth” for the UI theme.

1.1 Color palette (recommended defaults)

- **Primary (links, focus, primary actions):** #2563EB
- **Accent / Industrial orange (primary CTA, highlight):** #F59E0B
- **Danger (errors, critical badges):** #EF4444
- **Success (green states):** #22C55E
- **Info (secondary emphasis):** #0EA5E9

1.2 Surfaces & borders

- **Light mode background:** #F5F7FB
- **Dark surface (for side panels / cards in dark areas):** #0B1220
- **Card / panel surface (light):** #FFFFFF
- **Text (main):** #0F172A

- **Text (secondary):** #64748B
- **Border (default):** #E5E7EB
- **Border (dark):** `rgba(148, 163, 184, 0.35)`

1.3 Radii + shadows (industrial depth but not “neumorphism”)

- **Radius (card):** 12px
- **Radius (buttons):** 10px
- **Shadow (cards):** `0 10px 30px rgba(2, 6, 23, 0.08)`

1.4 Spacing system

- Use an **8px grid**:
- Page padding: 24px (desktop)
- Section padding: 16px
- Card padding: 16px
- Gaps: 12px / 16px (match between pages)

2) Ant Design Theming Rules (how to implement)

Implement with **ConfigProvider theme tokens** first (to avoid per-page hacks).

2.1 Theme overrides (must)

- Buttons:
 - Primary button background = Accent orange
 - Hover state: slightly darker orange
- Inputs / Selects:
 - Border radius = 10px
 - Focus border = primary blue
- Cards / Panels:
 - Border = #E5E7EB (light) / dark border above
 - Shadow enabled on light mode panels
- Badges / Tags:
 - Critical states use danger red
 - Neutral use blue-gray

2.2 Typography rules (must)

- Page title: 24–28px, weight 700
- Section title: 16–18px, weight 600
- Table header: 12–13px, weight 600
- Body: 12–14px

3) Page Shell Templates (all pages)

Template A: “Standard App Page”

Use for: most pages under Sidebar → content area. 1. Top area: page title + optional subtitle 2. Action row: right-aligned buttons (refresh/export/add) 3. Main content in: - **Cards grid** (dashboards and KPI pages) - **Tables inside card shells** (lists) 4. Loading/empty: - Loading skeleton inside the card body - Empty state centered inside card body (not full page)

Template B: “Dashboard”

Use for: Dashboard, Dashboard KPI, Success, Support dashboard. 1. KPI cards: 4–8 cards in responsive grid 2. Chart cards: - consistent chart container height per chart type - same legend typography 3. Filter bar: - compact chips, minimal vertical space - default filter values visible

Template C: “List + Detail”

Use for: Tickets list, Ticket detail, Solutions list. 1. List page: - filters as compact controls - sticky table header 2. Detail page: - two-column layout: - left: main fields + status - right: actions + activity/timeline blocks (if present)

4) Component Style Checklist (used everywhere)

Each component must match the same visual language:

4.1 Cards / Panels

- Rounded corners (12px)
- Border + subtle shadow
- Section headings inside card bodies use the same font sizes

4.2 Buttons

- Primary = Accent orange
- Secondary = Primary blue (outline/soft)

- Danger = red
- Consistent height and padding

4.3 Tables

- Header background uses light gray (or dark surface if dark mode)
- Row hover = subtle blue tint
- Empty = Ant empty state inside table container
- Pagination compact spacing

4.4 Forms

- Label style consistent
- Inputs with radius 10px and primary focus border
- Error messages in consistent red style

4.5 System messages

- Locked/maintenance overlay:
- dark industrial background
- title: "System under maintenance"
- reason + "Please wait."
- Release refresh bar:
- bottom fixed industrial blue background
- orange CTA button

5) Page-by-Page Design Tasks (PDF review checklist)

For every page below, do the following: 1. Replace any "inline random styling" with shared card/table/page-header components. 2. Ensure spacing and font hierarchy follows Templates A/B/C. 3. Ensure all tables/filters/buttons use the same theme overrides. 4. Align chart container styling with dashboard rules (Template B).

5.1 Dashboard (main)

Blocks - KPI summary cards grid - Trends/charts area - Small supporting tables (if any) **Requirements** - KPI cards: consistent heights, same icon/badge placement - Chart cards: single standard padding + title style - Filters: compact, no large form layout

5.2 Dashboard KPI (person dashboards)

Blocks - Person chooser header / filter bar - KPI card grid - KPI charts (bars/lines) - Supporting breakdown blocks (if present) **Requirements** - Filters visible but compact - Charts use consistent container height and color palette - Tables inside cards use the same density everywhere

5.3 Support Dashboard

Blocks - Stats cards (counts by status/queue) - “Feature tickets” list previews - Optional charts
Requirements - Cards use industrial border + shadow - Lists: same table style as Tickets page

5.4 Tickets (Support / all sub-sections)

Includes: **Chores & Bugs, Feature, Approval Status, Register of Tickets, Staging**

Tickets List Page

Requirements - Filter UI compact and consistent (no per-section UI drift) - Table: - status badges use same color mapping - priority/assignee consistently aligned - action column style consistent - Empty state: - show “No tickets for this filter” with a single CTA to clear filters

Ticket Detail Page

Requirements - Two-column layout: - left: key attributes + description - right: status/actions/audit/timeline blocks - Update forms/drawers: - consistent modal styling - consistent button placement (primary CTA last)

5.5 Task Section

Includes: **Checklist, Delegation**

Checklist Page

Requirements - Filter bar + tasks table/cards grid consistent - “Add task / Upload / NA modal” follows same modal style

Delegation Page

Requirements - Delegation tables use the same column typography and badge styles - Board/list items use consistent card styling

5.6 Success Section

Includes: **Su -Dash, Performance Monitoring, Comp- Perform**

Requirements - All KPI/chart containers match dashboard template B - Performance tables match Tickets table style - If there are multiple charts per page, each chart card uses same padding/title style

5.7 Client to Lead

Requirements - List styling matches Tickets (card + table inside) - Same filter chips + same empty state styling

5.8 Onboarding

Includes: **Record of Onboarding**

Requirements - Record page uses Template A with consistent header and card grouping - If it has tables/forms, they must match global table/form styles

5.9 Training

Includes: **Client Training**

Requirements - Training tables/forms use standard density and spacing - Chart blocks (if any) use dashboard chart-card container style

5.10 Client Payment

Includes: **Record of Pending Payment Details, Payment Management, Payment Ageing Report, Comp _ Register**

Requirements - Table/filters consistent across all client payment pages - "Ageing report" visuals must use the same chart-card and color rules

5.11 DB Client

Includes: **DB- Dash, Client ONB, Inactive clients**

Requirements - Standard dashboard cards + list/table blocks - Same card titles and table styles

5.12 Users + Section Permissions

Includes: **Users**

Requirements - Tables are consistent (row hover, badge colors, compact density) - Forms/modals for user edit: - clear grouping of role + section permissions - prevent huge scroll inside modal (use internal sections)

5.13 Settings

Includes: **System Control** (lock) and general settings UI

Requirements - “System Control” card styling follows Template A - Toggle states use industrial orange/blue mapping: - ON: accent + warning style - OFF: primary/info style - System lock popup/overlay: - Title: “System under maintenance” (as agreed) - Body: show reason if present, otherwise fallback “Please wait.”

5.14 Auth Pages (Login / Register / OTP / Password reset)

Requirements - Auth pages should use: - consistent brand header - centered card container - consistent button colors (primary = orange) - Error messages match global `message.error` visual language

6) Delivery Plan (implementation phases)

This PDF is the “what to do” checklist. Implementation should be phased:

Phase 1: Theme foundation (global)

- Implement Ant Design ConfigProvider theme tokens
- Create shared UI components:
- `IndustrialCard`, `IndustrialPageHeader`, `IndustrialTableShell`

Phase 2: Dashboard surfaces

- Dashboard + KPI dashboards + Support dashboard

Phase 3: Lists & Details

- Tickets + Ticket detail + Solutions + Staging

Phase 4: Tasks / Success / Payments / DB / Users / Settings

- Apply the same templates and verify alignment consistency

Phase 5: Auth + final polish

- Verify mobile spacing + accessibility (keyboard focus, aria labels)

7) “Done” Definition

- All pages share consistent spacing, card style, table style, and modal style.
- No page has unique random colors.
- Locked/maintenance and refresh UI look consistent everywhere.
